

A photograph of two men standing in a factory setting. The man on the left is wearing a light-colored polo shirt and khaki pants. The man on the right is wearing a dark suit, white shirt, and striped tie. They are standing in front of a large piece of industrial machinery, possibly a paper mill component. The background shows more machinery and a blue wall. A red banner with white text is overlaid on the top of the image.

Vision

Novaprint

"V" Series

Innovation

We know that as printers you are constantly facing the demand for new and more sophisticated designs to achieve increased brand value for your customers. ■ Through our ongoing R&D, we at Drent Goebel were early pioneers of hybrid technology and continue to consistently establish innovative standards of product engineering to better serve you. ■ Our variable size web-offset presses, based on a modular concept, can be customized to print a combination of a wide range of processes including flexo, gravure, screen, rotary, waterless on substrates ranging from film to paperboard, along with an array of inline specialty finishing for the most demanding applications. ■ Our most recent innovation, the VSOP (Variable Sleeve Offset Printing), with its revolutionary sleeve concept, provides you with an unmatched flexibility and affordability to print in any size increment, enabling you to stand out from your competition with your quality and price offering!

Quality

Drent Goebel has a proven history and combined experience of over 250 years in the design and manufacturing of web presses. ■ This makes us your perfect partner to provide you with a quality product and make your print house more profitable. ■ Because our customers operate in different print markets, you can benefit from our cross experience such as optimizing changeover for shorter run lengths – a recent trend that has now become a fact of life. ■ As a printer you know how important it is to have a consistently repeatable quality standard. ■ This is our guarantee to you: to provide the best price/quality ratio web press technology in the industry. ■ And of course all of our presses, because of their modular design and ability to work with curing technologies like UV and EB which minimize impact on the

environment by eliminating harmful VOCs (volatile organic compounds), provide your employees with a clean and healthy working environment.

"P" Series

Support

Whether you are based in the Americas, Europe or Asia, doing business with Drent Goebel means doing business with one company and getting the same high level of service and support globally. ■ And compared to most "global" press manufacturers, you can expect "local" manufacturing along with our strong service and support network. ■ In addition to our European manufacturing facilities in The Netherlands and Germany, our facility in Canada offers complete engineering design, manufacturing, assembly, sales and support for the North American market. ■ This is complemented by our Chicago facility that also provides complete sales and support to Drent Goebel's large installed base in North America. ■ As your partner we are large enough to be financially solid and commit to an intensive R&D program, and we are still small enough to be responsive to your immediate requirements because we are problem solvers through technology solutions!
